

Hack The Box

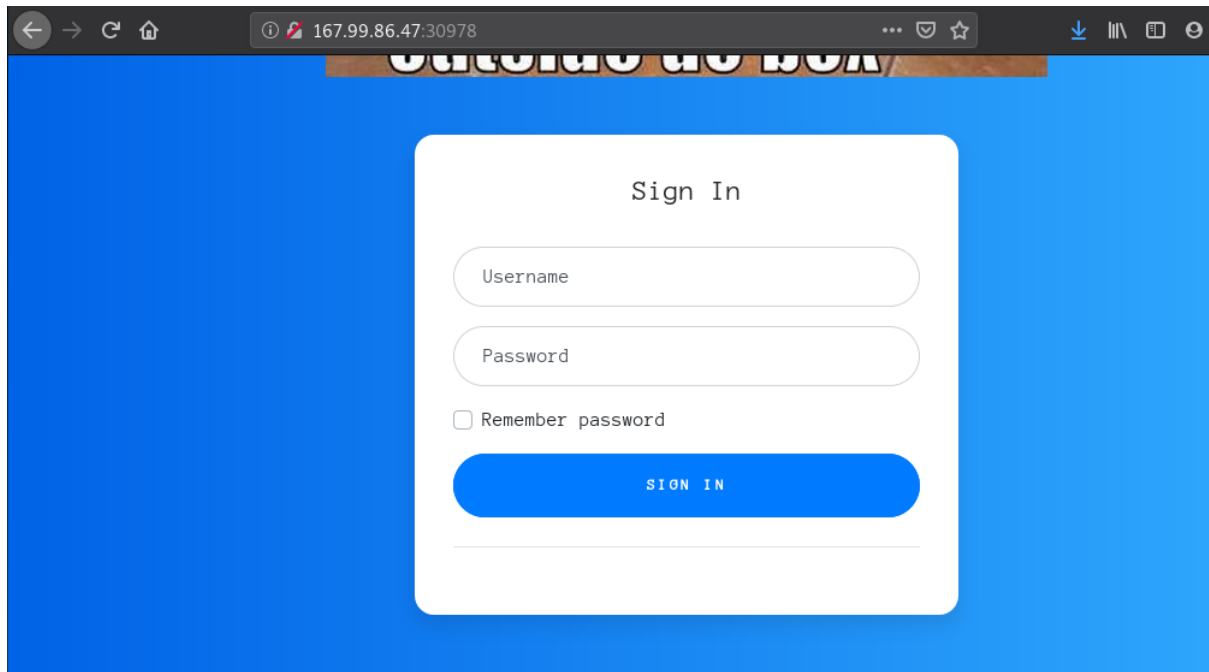

Web Challenge

Sanitize

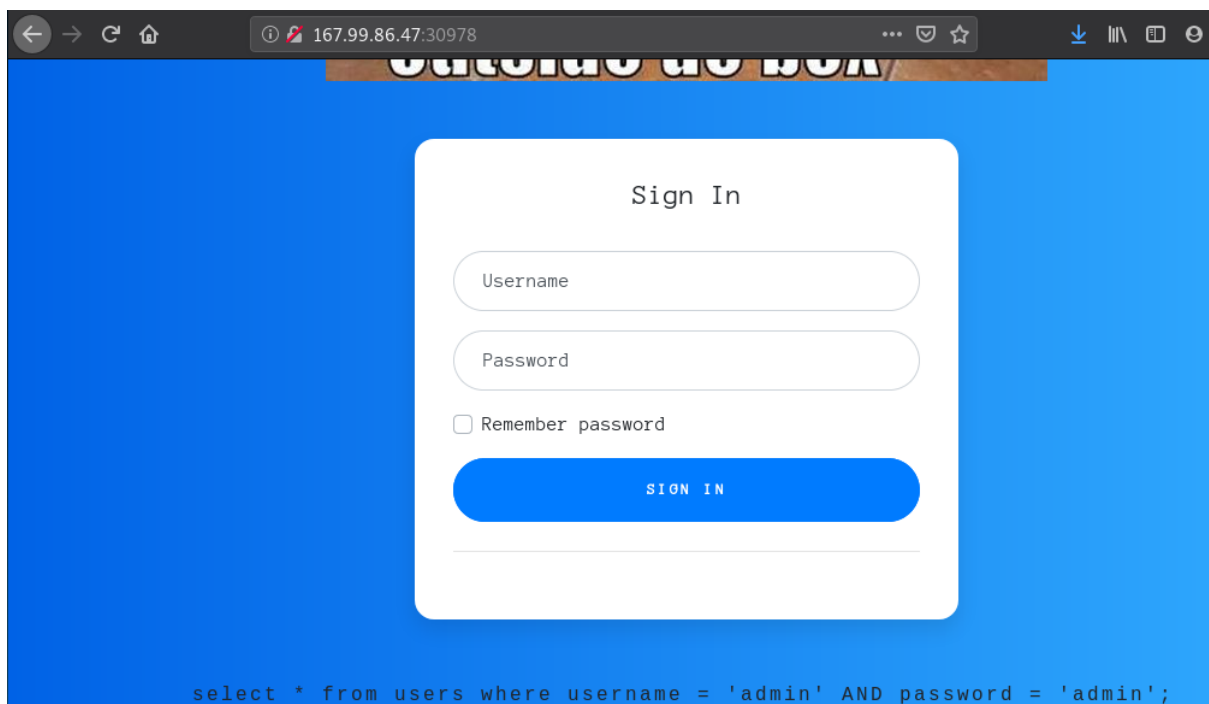

No Point (Retired Chall)

makelaris & makelarisjr

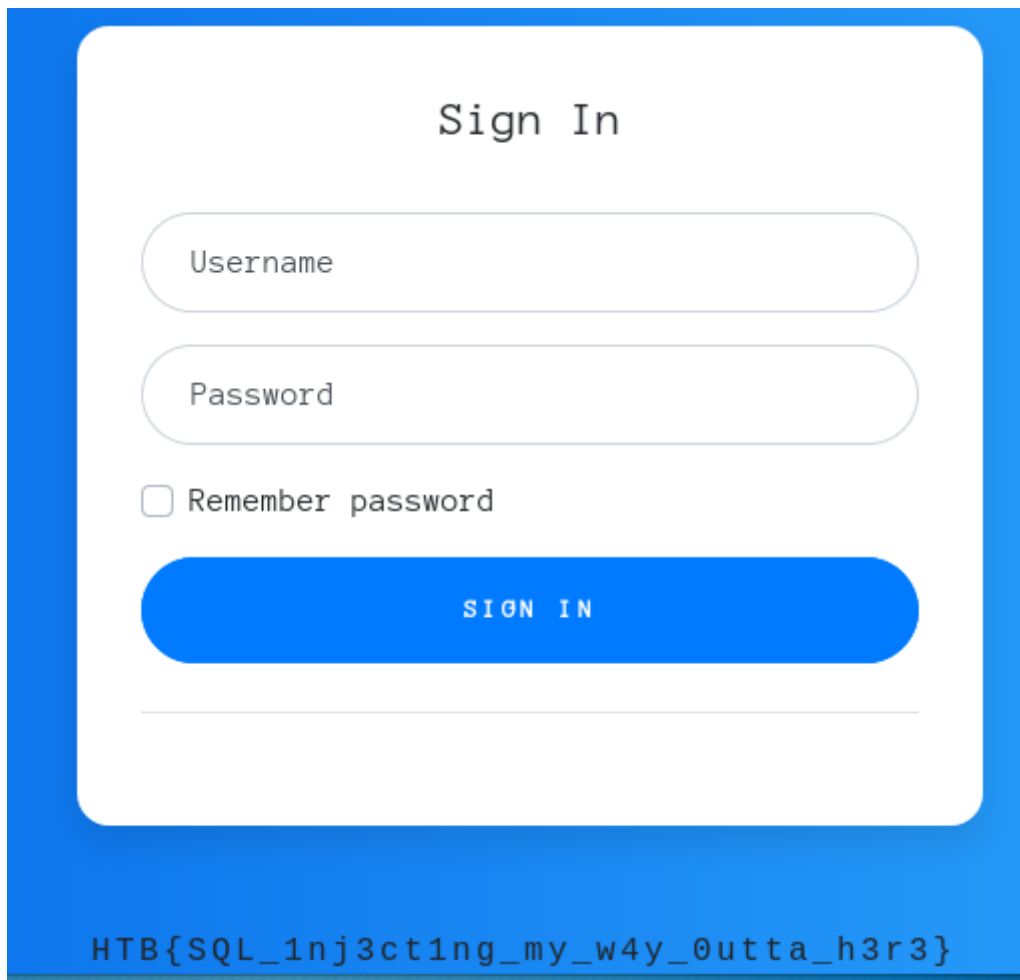

this chall was completed when I was a VIP on december to January, first thing first I have to start the instace to get the ip address of the challenge, and after know the ip address and access it, the web only load a kind of login form.

And I tried to input the known default credential like “admin:admin” or “admin:password123” but even I couldn’t login as admin, there is interesting error message on the bottom of the screen after I input any credential

So I tried to do simple sql injection (well the title of the challenge is obviously a hint), then I input “ ‘ or 1=1 – “ as username and “123” as the password.

Then I got the flag of this challenge, thanks to [makelaris](#) and [makelarisjr](#) to remind me a simple sql injection could lead to an account loss.
