

Hack The Box

Stego Challenge

Hidden in Colors

Hard – Retired Chall

SirenCeol

This challenge is quite easy even though the difficult was set to hard, the downloaded zipped file only contain 1 image like this

And the given description say about last 2 digit

We intercepted this weird image coming from a person of interest, can you figure it out because we sure can't. What we overheard is "the last two digits are of great importance".

So it must be a hex of the color of given picture, and using this online color picker : <https://imagecolorpicker.com/en/> I got the hex of each color

Color		Hex Color
		#9f2624
		#247c33
		#d42b63

			#5f5f30
			#0def21
			#110731

And all I need to do is extract the last of 2 digit of each hex so I got this “243363302131”, and the decoded text of the extracted string is

From_Hex('None')	\$3c0!1
------------------	---------

And I tried to submit the flag with HTB format, and that is a correct flag of the challenge

HTB{\$3c0!1}
